

## Accepted Manuscript

Title: Rodent, large animal and non-human primate models of spinal cord injury

Authors: Raffaele Nardone, Cristina Florea, Yvonne Höller, Francesco Brigo, Viviana Versace, Piergiorgio Lochner, Stefan Golaszewski, Eugen Trinkka

PII: S0944-2006(17)30010-7  
DOI: <http://dx.doi.org/doi:10.1016/j.zool.2017.06.004>  
Reference: ZOOL 25580

To appear in:

Received date: 19-1-2017  
Revised date: 2-6-2017  
Accepted date: 2-6-2017

Please cite this article as: Nardone, Raffaele, Florea, Cristina, Höller, Yvonne, Brigo, Francesco, Versace, Viviana, Lochner, Piergiorgio, Golaszewski, Stefan, Trinkka, Eugen, Rodent, large animal and non-human primate models of spinal cord injury. *Zoology* <http://dx.doi.org/10.1016/j.zool.2017.06.004>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Review

### Rodent, large animal and non-human primate models of spinal cord injury

## HIGHLIGHTS

- Animal models may help in identifying injury mechanisms in humans with spinal cord injury (SCI).
- Results from rodent studies are useful but there are anatomical and functional differences.
- Results from large animal models are useful in developing treatment strategies in humans.
- SCI in dogs is intermediate between rodent models and human clinical trials.
- The primate models help to develop appropriate methods relevant to humans.
