

## Acknowledgement of Reviewers

In 2016, more than 1,800 individuals contributed to Remote Sensing of Environment by reviewing papers submitted by their peers. Their work takes precious time and earns too little reward or recognition. Publication of their names is a small token of our appreciation for the time and thought they gave to reviews. Individuals who reviewed five or more papers are highlighted with an asterisk (\*). The quality of papers and the journal are greatly improved by their assistance; it is a significant contribution to our goal of publishing papers that advance the science and application of remote sensing. Reviewers, as well as authors, are critical to the success of RSE and we look forward to working with them in 2017 (and beyond) to further strengthen the role of remote sensing in mapping, monitoring and analyzing our environment.
