Thermodynamic Stability of Biomolecules And Evolution

Ashim K. Chakravarty , FNASc.

PII: S0022-5193(17)30256-4
DOI: [10.1016/j.jtbi.2017.05.035](https://doi.org/10.1016/j.jtbi.2017.05.035)
Reference: YJTBI 9092

To appear in: *Journal of Theoretical Biology*

Received date: 24 October 2016
Revised date: 21 May 2017
Accepted date: 23 May 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Loss in internal energy (E) level of a DNA molecule through the changes in the bonds
- Such intrinsic changes earn more thermodynamic stability for the evolving biomolecules
- The process also add to the variations in structure and function of DNA molecules, for natural selection
- Thermodynamic stability of biomolecules in the process of evolution is a new perspective
- This concept is likely to solve certain standing problems in evolution
