Title: Host cell targets for African swine fever virus

Author: Raquel Muñoz-Moreno Inmaculada Galindo Miguel
Ángel Cuesta-Geijo Lucía Barrado-Gil Covadonga Alonso

PII: S0168-1702(15)00237-3
DOI: <http://dx.doi.org/doi:10.1016/j.virusres.2015.05.026>
Reference: VIRUS 96623

To appear in: *Virus Research*

Received date: 21-4-2015
Revised date: 28-5-2015
Accepted date: 29-5-2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- ASFV enters macrophages by clathrin- or lipid rafts/caveolae-mediated endocytosis
- Viral entry requires cholesterol, PI3P, actin dynamics and related signaling
- Host targets for ASFV at the endocytic pathway are Rab GTPases and phosphoinositides
- Viral factory formation is not related to canonical aggresome formation pathways
