Non-eluting, surface-bound enzymes disrupt surface attachment of bacteria by continuous biofilm polysaccharide degradation

Dalal Asker, Tarek S. Awad, Perrin Baker, P. Lynne Howell, Benjamin D. Hatton

PII: S0142-9612(18)30184-4

DOI: [10.1016/j.biomaterials.2018.03.016](https://doi.org/10.1016/j.biomaterials.2018.03.016)

Reference: JBMT 18542

To appear in: *Biomaterials*

Received Date: 2 November 2017

Revised Date: 28 February 2018

Accepted Date: 12 March 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

14  
15 **Keywords:** biofilms, exopolysaccharides, *Pseudomonas aeruginosa*, glycoside hydrolase, biomaterials.

16  
17 **Author Contributions:** DA, TSA, PB, PLH and BDH designed the research. TSA performed the  
18 enzyme immobilization and surface characterization. DA performed the microbiology tests and image  
19 analysis. PB prepared and purified PslG<sub>h</sub> and performed the western blot analysis. All authors analyzed  
20 the data, wrote and approved the final manuscript.
