This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Molecular autopsy in a cohort of infants died suddenly at rest

Genetics and sudden infant death

Highlights

- Forensic guidelines propose molecular autopsy if no conclusive cause of death.
- Genetic analysis may help to unravel the cause of death in infants died suddenly.
- A 20% of sudden infant death cases carried a potentially pathogenic variant.
- Careful genetic interpretation should be done before clinical translation.
