New methodology for parameter estimation of offshore slug models with Hopf bifurcation

Ricardo F. Rodrigues , Jorge O. Trierweiler , Marcelo Farenzena

PII: S0098-1354(18)30114-5
DOI: [10.1016/j.compchemeng.2018.06.012](https://doi.org/10.1016/j.compchemeng.2018.06.012)
Reference: CACE 6138

To appear in: *Computers and Chemical Engineering*

Received date: 2 March 2018
Revised date: 4 June 2018
Accepted date: 17 June 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Least squares method is not adequate for Hopf bifurcation models
- Novel approach for parameter estimation based on weighted sum of least squares
- Improved parameter estimation of models presenting limit cycle and Hopf bifurcation
- Statistically better model fits for the latest slug models
