Academic staff, Nigeria

ABSTRACT

This article presented data on the effect of training and development on academic staff creativity using Covenant University in Nigeria as the case study. The article was based on a descriptive quantitative research design using Survey method. The population of the study included all academic staff in the selected university with a total of 535 faculties. A sample size of 226 faculties was selected. Reliability and validity procedures were confirmed. Data was analyzed with the use of Statistical Package for Social Sciences (SPSS). Regression analysis was employed as statistical tool of analysis. The field data set is made publicly available to enable critical or extended analysis.

1. Introduction

Many university students in Nigeria are not able to obtain the information and support they need to persevere and graduate which earn institutions a reputation as being unsympathetic to student needs [1]. This owes largely to the absence of training and development of academic staff of these

universities. Undoubtedly, training and development programmes for academic staff have long-term profits that outweigh the immediate costs. Coordinated training and development of academic staff is important because all students, irrespective of their courses deserve to have access to teachers or instructors who are knowledgeable and up-to-date on the policies, procedures, theories, and resources that help students thrive [4]. People want to feel knowledgeable at their jobs; hence providing academic staff with training and professional development can boost creativity in job performance [5]. Neglecting training and professional development for academic staff affects not only students, but also the institution which bears the costs of reduced efficiency. Therefore, this article presents data on the effect of training and development on creativity of academic staff in a Nigerian University in a bid to motivate critical or extended analysis on the subject.

Specification Table

Subject area	Business, Management
More Specific Subject Area:	Human Resource Management
Type of Data	Table
How Data was Acquired	Researcher-made questionnaire analysis
Data format	Raw, analyzed, Inferential statistical data
Experimental Factors	Sample consisted of Academic staff. The researcher-made questionnaire which contained data on training and development and creativity of academic staff were completed..
Experimental features	Creativity is an important component of employee performance in contemporary organizations
Data source location	South west Nigeria
Data Accessibility	Data is included in this article

Value of data

These data present information on training and development as it relates to creativity of academic staff in the university context. This is important considering that training programmes strengthen those skills that an employee needs to improve, while a development programme brings employees to a higher level so they all have similar skills and knowledge.

The results showed that organizing and facilitating training and development for academic staff can expedite acquisition of creative skills required for effective job performance.

The results can motivate the identification of relevant training and development regime required to stimulate creativity in academic staff.

2. Data

The data comprised raw inferential statistical data on the effect of training and development on creativity of academic staff of covenant university Nigeria. Explicitly, regression analysis was used to test the effect of the independent variable on the dependent variable. Table 1 shows the model summary of the analysis based on the hypothesis tested. The Model summary' table provides information about the regression line's ability to account for the total variation in the dependent variable.
