This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Trajectories of Alcohol Initiation and Use During Adolescence: The Role of Stress and Amygdala Reactivity

RH = Alcohol Use, Stress, Amygdala Reactivity

Nourhan M. Elsayed, BA, M. Justin Kim, PhD, Kristina M. Fields, BA, Rene L. Olvera, MD, Ahmad R. Hariri, PhD, Douglas E. Williamson, PhD

Supplemental Material

Accepted June 11, 2018

Ms. Elsayed and Drs. Kim and Hariri are with Duke University, Durham, NC. Dr. Williamson is also with Duke University, the Durham Veterans Affairs Medical Center, Durham, NC, and the University of Texas Health at San Antonio. Dr. Olvera and Ms. Fields are also with the University of Texas Health at San Antonio.

Funding for this study was supported by the R01AA016274 (Williamson). The Laboratory of NeuroGenetics received support from Duke University as well as US-National Institutes of Health Grants R01DA033369, R01DA03157, and R01AG049789.

This study was presented as a poster at the American Academy of Child and Adolescent Psychiatry's 64th Annual Meeting in Washington, DC, October 23-28, 2017.

The authors thank the Teen Alcohol Outcomes Study participants as well as the staff of the Translational Center for Stress-Related Disorders and the Laboratory of NeuroGenetics at Duke University.

Drs. Kim, Olvera, Hariri, Williamson, and Mss. Elsayed and Fields report no biomedical financial interests or potential conflicts of interest.
