This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The study explored the relationship between temperament and emotional eating
- Different associations were found in subjects with or without restriction, purging, or bingeing
- Subjects with restriction had higher Persistence scores
- Binge group reported lower Persistence and higher Novelty Seeking scores
- Purge group showed lower Reward Dependence, Self Directedness, Cooperativeness scores
