This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Occupational status is more associated with non-cognitive skills.
- Cognitive skills are significantly related with male wages.
- Leadership is the most related competence to managerial positions among men.
- For women, initiative and enterprise is the most relevant in managerial positions.
- None of the competencies exhibits a significant association with females' wages.
