This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- We propose Spontaneous Social Network (SSN), grouping people without former relation.
- The main contribution is the creation of communities based on multiple contexts.
- We develop a mobile application called Dino to evaluate SSN model.
- The experiments showed average of 84%/80% for sense of community/belonging.
- Other obtained results for SSN were 90% usefulness, 92% loyalty and 81% ephemerality.
