This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- The structured output regression machine (SORM) is improved by considering the correlation and independence between different output components.
- The model combine sparse coding with the improved SORM is used to SISR.
- The global and nonlocal optimization with a new similarity weight is proposed to further improve the reconstructed HR images.
