

# Accepted Manuscript

Formally verifying Exceptions for Low-level code with Separation Logic

Marco Paviotti, Jesper Bengtson

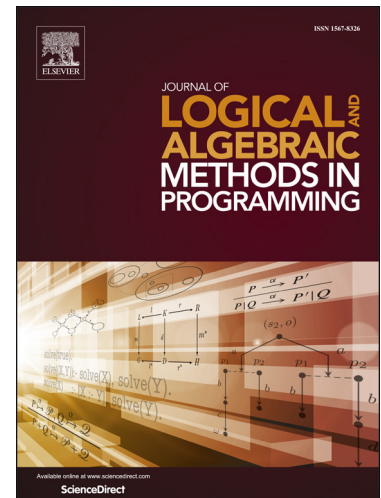

PII: S2352-2208(17)30165-7  
DOI: <https://doi.org/10.1016/j.jlamp.2017.09.004>  
Reference: JLAMP 193

To appear in: *Journal of Logical and Algebraic Methods in Programming*

Received date: 31 January 2016  
Revised date: 22 September 2017  
Accepted date: 23 September 2017

Please cite this article in press as: M. Paviotti, J. Bengtson, Formally verifying Exceptions for Low-level code with Separation Logic, *J. Log. Algebraic Methods Program.* (2017), <https://doi.org/10.1016/j.jlamp.2017.09.004>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- Extended semantics for exception handling.
- New rules for verification of assembly programs with exceptions.
- Proof of concept: Memory allocation with exceptions.
- All results are mechanised in Coq.
- The extension to the logic is conservative.
