This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- A propagated mesh filtering model is proposed. It can be used in mesh denoising and texture removal. When computing the filtering weight, the integral of two kinds of property differences are taken into consideration. Some design options of the propagated model are specialized in view of the characteristic of mesh denoising.
