Enhancement and Restoration of non-uniform illuminated Fundus Image of Ratina obtained through thin layer of Cataract

Anirban Mitra , Sudipta Roy , Somais Roy , Sanjit Kumar Setua

PII: S0169-2607(17)31538-9
DOI: [10.1016/j.cmpb.2018.01.001](https://doi.org/10.1016/j.cmpb.2018.01.001)
Reference: COMM 4588

To appear in: *Computer Methods and Programs in Biomedicine*

Received date: 24 December 2017
Revised date: 7 January 2018
Accepted date: 7 January 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A novel method is proposed based on the cataract physical model to reduce the generated blurriness of the fundus image
- Image acquisition through thin layer of cataract by the fundus camera and then enhancement of the images with an objective on contrast perfection with no preamble of artifacts
- Gamut less image enhancement by intensity histogram equalization in adapted Hue Saturation Intensity (HSI) color image space
- The resulting image show appropriate brightness and saturation, enhance contrast, reinstate the color space information and maintain complete information
