

## Accepted Manuscript

A framework for configuring collaborative filtering-based recommendations derived from purchase data

Stijn Geuens , Kristof Coussement , Koen W. De Bock

PII: S0377-2217(17)30632-X  
DOI: [10.1016/j.ejor.2017.07.005](https://doi.org/10.1016/j.ejor.2017.07.005)  
Reference: EOR 14555

To appear in: *European Journal of Operational Research*

Received date: 30 October 2015  
Revised date: 7 December 2016  
Accepted date: 4 July 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- A decision framework to evaluate collaborative filtering algorithms is created.
- Realistic binary purchase data sets are simulated and varied on 3 input properties.
- 22 collaborative filtering algorithm variations are assessed for each data set.
- Regarding accuracy, one configuration dominates independent from input properties.
- Regarding diversity and computing time, best algorithms are affected by the input.
