This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We propose two new heuristics for solving the generalized median graph problem.
- GRASP heuristic is able to solve much larger problems and find better solutions.
- Generalized median graph shows itself to be a better representative than the median graph.
- Generalized median graph offers a good alternative approach to k-NN classifiers.
