This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- Weighted overlap dominance is formalized for a general class of multi-criteria problems.
- The WOD-relevance mechanism allows learning preferences and attitudes from uncertain data.
- Preferences are robust with respect to a set of (inferred) decision attitudes.
- The moderation of the WOD system allows optimal/robust decision making.
