Robust shape optimization of continuous structures via the level set method

Jesús Martínez-Frutos, David Herrero-Pérez, Mathieu Kessler, Francisco Periago

PII: S0045-7825(16)30083-4

DOI: <http://dx.doi.org/10.1016/j.cma.2016.03.003>

Reference: CMA 10874

To appear in: *Comput. Methods Appl. Mech. Engrg.*

Received date: 26 October 2015

Revised date: 1 March 2016

Accepted date: 2 March 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Robust shape optimization considering uncertainty in loads and material is proposed.
- Stochastic shape derivatives of continuous structures are obtained.
- The existence of a solution for the robust shape optimization problem is proved.
- Different probability distributions and random fields are considered in experiments.
