This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A multi-focus image fusion algorithm is proposed to increase depth-of-field.
- Image fusion is performed using Content Adaptive Blurring algorithm.
- It induces non-uniform blur in images, which is used to obtain a decision map.
- Graph-cut techniques are used to further refine the decision map.
- Qualitative and quantitative evaluations show excellent performance of our method.
