This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Multi-sensor systems with prediction compensation of packet losses are studied.
- Centralized fusion estimators are presented in LUMV sense.
- Local optimal estimators are designed for each sensor subsystem.
- Estimation error cross-covariance matrices between local estimators are derived.
- Distributed fusion estimators weighted by matrices are presented in LUMV sense.
