Learning Domain-Shared Group-Sparse Representation for
Unsupervised Domain Adaptation

Baoyao Yang, Andy J. Ma, Pong C. Yuen

PII: S0031-3203(18)30161-4
DOI: [10.1016/j.patcog.2018.04.027](https://doi.org/10.1016/j.patcog.2018.04.027)
Reference: PR 6541

To appear in: *Pattern Recognition*

Received date: 31 October 2017
Revised date: 27 February 2018
Accepted date: 27 April 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- An equivalent condition for conditional distribution alignment is derived.
- Propose a domain-shared group-sparse dictionary learning model for unsupervised domain adaptation.
- Develop a classifier with both domain-shared and target-specific information.
- Our method achieves good performance in several cross-dataset recognition tasks.
