Fundamental visual features for aesthetic classification of photographs across datasets

François Lemarchand

PII: S0167-8655(18)30183-1
DOI: [10.1016/j.patrec.2018.05.016](https://doi.org/10.1016/j.patrec.2018.05.016)
Reference: PATREC 7182

To appear in: *Pattern Recognition Letters*

Received date: 24 July 2017
Revised date: 19 April 2018
Accepted date: 9 May 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlight:

- Design efficient visual features to classify photographs depending on aesthetics.
- Develop extensive tests to improve comparisons between aesthetic classifiers.
- Investigate a population's aesthetic preferences using low-level features.
- Robust cross-dataset performances in computational aesthetic classification.
