This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We have extended our earlier proposed feature descriptor named Scale and Rotation Invariant Features (SRIF).
- SRIF is capable of extracting and encoding discriminatory information from heterogeneous-content in document images
- SRIF is computed based on geometrical constraints between pairs of nearest points around a keypoint
- SRIF has built-in capability to robustly deal with feature point extraction errors
- SRIF outperforms the state-of-the-art in terms of processing time with an equal or greater Recall and Precision.
