Adaptive Structure Learning for Low-rank Supervised Feature Selection

Yonghua Zhu, Xuejun Zhang, Rongyao Hu, Guoqiu Wen

PII: S0167-8655(17)30273-8
DOI: [10.1016/j.patrec.2017.08.018](https://doi.org/10.1016/j.patrec.2017.08.018)
Reference: PATREC 6899

To appear in: *Pattern Recognition Letters*

Received date: 6 June 2017
Revised date: 1 August 2017
Accepted date: 14 August 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Taking both local and global construction preservation into account.
- We have modified common low-rank constraint in our model.
- Coupling graph matrix learning and feature space learning by an iteration way.
- Coupling subspace learning and feature selection in a unified framework.
- The results on eight dataset are competitive in term of classification.
