This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We present a novel approach for 3D gestural interaction based on depth images.
- We propose a direct method for real-time hand pose estimation.
- Our method can be generalized to accommodate different interaction systems.
- The system is implemented and tested on desktop computer and mobile platform.
- Usability analysis reveals that our system can be used in real-world applications.
