

Accepted Manuscript

The impact of the Lombard effect on audio and visual speech recognition systems

Ricard Marxer, Jon Barker, Najwa Alghamdi, Steve Maddock

PII: S0167-6393(17)30267-4
DOI: [10.1016/j.specom.2018.04.006](https://doi.org/10.1016/j.specom.2018.04.006)
Reference: SPECOM 2557

To appear in: *Speech Communication*

Received date: 14 July 2017
Revised date: 12 April 2018
Accepted date: 18 April 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Analysis of audio and visual Lombard speech using new 54 speaker database.
- New data on the inter-speaker variability of the Lombard effect.
- Measurement of the impact of Lombard mismatch in a noise robust speech recognition system.
- Detailed analysis of plain speech versus Lombard speech performance in well-adapted recognition system.
- Evidence that visual Lombard speech supports higher recognition performance than visual plain speech.
