This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- Created nonlinear finite element model of the Advanced Combat Helmet (ACH)
- Evaluated the ballistic performance of ACH under various ballistic impacts.
- Compared simulation results with NIJ standard tests and the V50 ballistic limit tests
- Found good agreement between simulation results and test data
- Evaluated the ACH performance under rifle bullet impacts.
