Free and forced vibrations of nanowires on elastic substrates

Guang-Yuan Su, Ying-Xu Li, Xiang-Yu Li, Ralf Müller

PII: S0020-7403(17)30416-2
DOI: [10.1016/j.ijmecsci.2018.01.039](https://doi.org/10.1016/j.ijmecsci.2018.01.039)
Reference: MS 4157

To appear in: *International Journal of Mechanical Sciences*

Received date: 17 February 2017
Revised date: 23 January 2018
Accepted date: 30 January 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Three types of foundation models are employed to describe different substrates.
- Characteristic equations and mode shapes are presented.
- The effective Young's modulus is obtained based on the free vibration analyses.
- The dynamic Green's function is derived through the Laplace transform.
- Effects of elastic substrate and surface are examined via numerical examples.
