Effective elastic properties and initial yield surfaces of two 3D lattice structures

Mingyang Zhang , Zhenyu Yang , Zixing Lu , Baohua Liao , Xiaofan He

PII: S0020-7403(17)32904-1
DOI: [10.1016/j.ijmecsci.2018.02.008](https://doi.org/10.1016/j.ijmecsci.2018.02.008)
Reference: MS 4168

To appear in: *International Journal of Mechanical Sciences*

Received date: 15 October 2017
Revised date: 1 February 2018
Accepted date: 3 February 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Effective elastic properties of two lattice structures are investigated theoretically.
- The coupling effect of axial force and bending moment in a yielding beam is considered.
- Yield surfaces under complex stress states are depicted and verified by FE calculation.
- The evolution of yield surfaces is discussed systematically.
