This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- Buckling of carbon fibers in EMCs plate at finite strain is investigated.
- Size effects of carbon fibers on the shear strain are discussed.
- Effects of fiber volume fraction on the half-wavelength are analyzed.
- Effects of the EMCs plate thickness on the half-wavelength are investigated.
