Reliability analysis and functional design using Bayesian networks generated automatically by an “Idea Algebra” framework

Andas Amrin , Vasileios Zarikas , Christos Spitas

PII: S0951-8320(18)30216-3
DOI: [10.1016/j.ress.2018.07.020](https://doi.org/10.1016/j.ress.2018.07.020)
Reference: RESS 6219

To appear in: *Reliability Engineering and System Safety*

Received date: 25 February 2018
Revised date: 11 July 2018
Accepted date: 18 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Idea Algebra Framework automates several steps of the creation of a Bayesian Network
- Idea Algebra implemented in Mathematica. Bayesian Network implemented in GeNIe.
- The Bayesian Networks of 25 different automobiles were evaluated and tested.
