This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- Availability-based engineering resilience metric is proposed.
- A dynamic-Bayesian-networks-based evaluation methodology is developed.
- A series, parallel and voting system is used for demonstrating the methodology.
- A nine-bus power grid system is also used for demonstrating the methodology.
