This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- Hidalgo, Hausman and co-authors recently proposed a product space for measuring the technical proximity between exported products.
- We propose a micro-founded agent-based model aiming at explaining the dynamics of countries' movements on this product space.
- Focusing on East Asian countries, we simulate public policies in China.
- These policies are effective at improving the export performance of China, but also generate unexpected changes in the real export of the neighboring economies.
