This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Psychophysiology of Proactive and Reactive Relational Aggression

Dianna Murray-Close, Leigh Ann Holterman, Nicole L. Breslend, Alexandra Sullivan

University of Vermont

Correspondence regarding this article should be sent to Dianna Murray-Close, University of Vermont, 2 Colchester Avenue, Burlington, VT 05405. Email: dmurrayc@uvm.edu.

Acknowledgements. Preparation of this manuscript was supported by a grant from the National Science Foundation (BCS-1450777) to Jamie M. Ostrov and Dianna Murray-Close and a National Science Foundation Graduate Research Fellowship to Leigh Ann Holterman. The authors would like to thank the Social Development Laboratory research staff and study participants for making this research possible.

Highlights

- Sympathetic and parasympathetic arousal may jointly predict aggression
- Sympathetically-mediated overarousal predicted reactive relational aggression
- Parasympathetic augmentation predicted aggression at low sympathetic reactivity
- Effects only emerged in the context of a standardized social stressor
