Title: Brain correlates of hypnosis: A systematic review and meta-analytic exploration

Authors: Mathieu Landry, Michael Lifshitz, Amir Raz

PII: S0149-7634(16)30603-0

DOI: <http://dx.doi.org/doi:10.1016/j.neubiorev.2017.02.020>

Reference: NBR 2785

To appear in:

Received date: 1-10-2016

Revised date: 31-1-2017

Accepted date: 20-2-2017

Please cite this article as: Landry, Mathieu, Lifshitz, Michael, Raz, Amir, Brain correlates of hypnosis: A systematic review and meta-analytic exploration. *Neuroscience and Biobehavioral Reviews* <http://dx.doi.org/10.1016/j.neubiorev.2017.02.020>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Running head: Neural correlates of hypnosis

TITLE

Brain correlates of hypnosis: A systematic review and meta-analytic exploration

AUTHORS

CORRESPONDENCE

Professor Amir Raz,
4333 Cote Ste. Catherine, Montreal,
QC, H3T 1E4, Canada
amir.raz@mcgill.ca

Word Count: 10,132 words (excluding abstract and references)

Highlights:

- We performed a comprehensive review and two meta-analyses of brain-imaging studies on hypnosis;
- Hypnotic phenomena link with modulations of core brain networks operationalizing higher-order cognition;
- Our meta-analytic results further reveal that hypnosis relates with increased activity in the higher-order visual areas;
