This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

HIGHLIGHTS

- * Most of the heterogeneous firm studies use the Pareto distribution of productivity.
- * This paper identifies the dispersion of the Pareto productivity distribution in trade.
- * The basic model is based on the Melitz-type model with the endogeneity of export variety.
- * N3SLS regression is used to cure the endogeneity problem.
