Title: Identification of Degradation Products of Praziquantel during the Mechanochemical Activation

Authors: Ivana Šagud, Debora Zanolla, Beatrice Perissutti, Nadia Passerini, Irena Škorić

PII: S0731-7085(18)31383-9
DOI: <https://doi.org/10.1016/j.jpba.2018.07.002>
Reference: PBA 12073

To appear in: *Journal of Pharmaceutical and Biomedical Analysis*

Received date: 11-6-2018
Revised date: 3-7-2018
Accepted date: 3-7-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

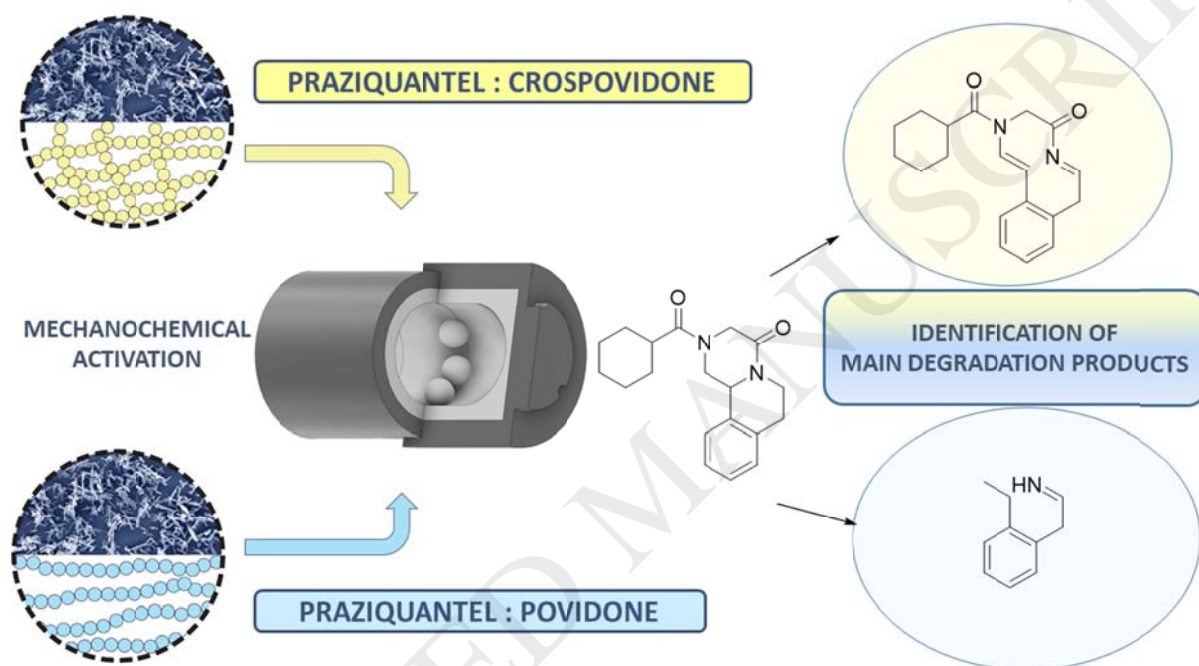

Identification of Degradation Products of Praziquantel during the Mechanochemical Activation

Highlights

- Praziquantel, BCS II class drug, is mechanochemically activated in vibrational mill
- Cogrounding process with povidone and crospovidone gives several degradation products
- Degradation products depend on the polymer type rather than the process conditions
- Two of the main degradation products are identified
