Title: Fabrication of novel metal ion imprinted Xanthan Gum-Layered double hydroxide nanocomposite for adsorption of Rare Earth Elements

Authors: Sidra Iftekhar, Varsha Srivastava, Samia Ben Hammouda, Mika Sillanpää

PII: S0144-8617(18)30440-5
DOI: <https://doi.org/10.1016/j.carbpol.2018.04.054>
Reference: CARP 13508

To appear in:

Received date: 17-1-2018
Revised date: 13-4-2018
Accepted date: 13-4-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Fabrication of novel metal ion imprinted Xanthan Gum-Layered double hydroxide nanocomposite for adsorption of Rare Earth Elements

Graphical abstract

Highlights

- Bifunctional Zr@XG-ZA was synthesized by encapsulation and anchoring method
- Incorporation of ZA and anchoring of Zr was evidenced by TEM, SEM–EDX, FTIR studies
- Adsorption of REEs on Zr@XG-ZA in multicomponent system was higher than single system
- REE doped nanocomposite was efficient enough to use as photocatalyst for tetracycline
