This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Design and biological response of doxycycline loaded chitosan microparticles for periodontal disease treatment

Highlights

- EC coated CS/TPP MPs showed controlled release of doxycycline hyclate
- Mixed polymer surface of EC coated CS/TPP MPs exhibited high muco/bioadhesion
- MPs didn't affect the viability of the tested epithelial cell line
- MPs induced slow and graduate apoptosis during 24h in RAW264.7 cell line
- CS/TPP & EC coated CS/TPP MPs potentiate the anti-inflammatory effect of doxycycline
