This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Design and Studies of Multiple Mechanism of anti-*Candida* Activity of a New Potent Trp-rich Peptide Dendrimers

Zielińska Paulina, Staniszevska Monika*, Bondaryk Małgorzata, Koronkiewicz Mirosława, Urbaczyk-Lipkowska Zofia

Candida albicans exposed to peptide dendrimer **14** at MIC concentration of 16 $\mu\text{g}/\text{mL}$. The cell wall staining with calcofluor white revealed that blastoconidial cells (arrowheads) and hyphae (arrow) were swollen and abnormally elongated.
