This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- A Hybrid fault detection approach based on intelligent classifiers was proposed.
- Experimental data during emergency shut-downs were employed.
- Decision fusion technique was applied to combine the output of classifiers.
- Fault detection prevented from undesired system trips.
