Uncertainty Quantification of Multi-dimensional Parameters for Composite Laminates Based on Gray Mathematical Theory

Xiao Chen , Xiaojun Wang , Lei Wang , Qinghe Shi , Yunlong Li

PII: S0307-904X(17)30678-9  
DOI: [10.1016/j.apm.2017.10.038](https://doi.org/10.1016/j.apm.2017.10.038)  
Reference: APM 12039

To appear in: *Applied Mathematical Modelling*

Received date: 16 February 2017  
Revised date: 7 August 2017  
Accepted date: 26 October 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- It can eliminate big errors in experimental points of elastic parameters.
- Multi-dimensional parameters can be treated as correlated interval variables.
- Auto and mutual uncertainties for elastic parameters can be estimated.
- It can give out a feasible domain with correlations for uncertain analysis.
