Aqueous acid and alkaline extraction of rare earth elements from coal combustion ash

Jack F. King, Ross K. Taggart, Ryan C. Smith, James C. Hower, Heileen Hsu-Kim

PII: S0166-5162(18)30193-9
DOI: doi:[10.1016/j.coal.2018.05.009](https://doi.org/10.1016/j.coal.2018.05.009)
Reference: COGEL 3016
To appear in: *International Journal of Coal Geology*
Received date: 5 March 2018
Revised date: 23 May 2018
Accepted date: 23 May 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Aqueous Acid and Alkaline Extraction of Rare Earth Elements from Coal Combustion Ash

Jack F. King^{1,2}, Ross K. Taggart¹, Ryan C. Smith¹, James C. Hower³, Heileen Hsu-Kim^{1*}

* Corresponding Author: hsukim@duke.edu, (919) 660-5109

Keywords: coal combustion residues; rare earth elements; acid leaching; alkaline digestion

Highlights:

- REEs were efficiently leached by heated HCl in Powder River Basin coal fly ashes
- Acid leaching was not effective for ashes from Appalachian and Illinois Basin coals
- Aqueous NaOH digestion of the coal ashes improved the acid leachability of REEs
