Study of the pressure drop and the flow of loss circulation material suspensions in a physical simulator of fractures

Felipe Augusto Paes de Godoi, Cláudia Miriam Scheid, Letícia Siqueira Bernardo, Beatriz Rosas de Oliveira, Moacyr Nogueira Borges Filho, Luís Américo Calçada

PII: S0920-4105(18)30338-3

DOI: [10.1016/j.petrol.2018.04.031](https://doi.org/10.1016/j.petrol.2018.04.031)

Reference: PETROL 4883

To appear in: *Journal of Petroleum Science and Engineering*

Received Date: 23 October 2017

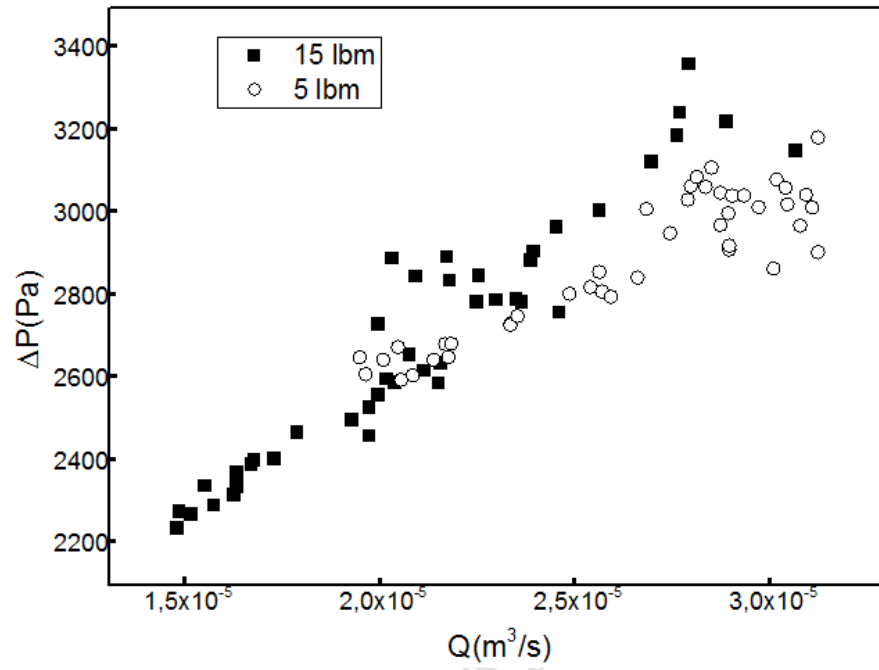

Revised Date: 11 April 2018

Accepted Date: 13 April 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Graphical abstract.

Flow rate as a function of the pressure drop of the suspensions of fine laminar calcium carbonate at 5lbm/bbl and 15 lbm/bbl through a 10 mm fracture.
