

## Accepted Manuscript

Proper selection of 1g controls in simulated microgravity research  
as shown for clinorotated plant cell suspension cultures

Khaled Y. Kamal, Ruth Hemmersbach, F. Javier Medina,  
Raúl Herranz

PII: S2214-5524(15)00021-8  
DOI: <http://dx.doi.org/10.1016/j.lssr.2015.04.004>  
Reference: LSSR 51

To appear in: *Life Sciences in Space Research*

Received date: 18 December 2014  
Revised date: 24 March 2015  
Accepted date: 8 April 2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## **Highlights**

- 2D clinorotation is used to simulate microgravity for cell cultures.
- Microgravity decouples plant cell proliferation and cell growth.
- Definition of 1g control conditions is not trivial for cultures.
- Shaking 1g control induces stress responses in the cells.
- Non-shaking 1g control leads to cell viability issues.
