This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- There has been limited longitudinal analysis of hysterectomy and vasomotor symptoms.
 - The present study found that hysterectomy with ovarian conservation is associated with persistent hot flushes and night sweats.
 - Obesity, smoking and a lower level of education/occupation are also associated with persistent symptoms.
-

Hot flushes and night sweats symptom profiles over a 17-year period in mid-aged women: the role of hysterectomy with ovarian conservation.
