

Accepted Manuscript

Conditional disruption of hepatic carbamoyl phosphate synthetase 1 in mice results in hyperammonemia without orotic aciduria and can be corrected by liver-directed gene therapy

Suhail Khoja, Matt Nitzahn, Kip Hermann, Brian Truong, Roberta Borzone, Brandon Willis, Mitchell Rudd, Donna J. Palmer, Philip Ng, Nicola Brunetti-Pierri, Gerald S. Lipshutz

PII: S1096-7192(18)30059-3
DOI: doi:[10.1016/j.ymgme.2018.04.001](https://doi.org/10.1016/j.ymgme.2018.04.001)
Reference: YMGME 6339

To appear in: *Molecular Genetics and Metabolism*

Received date: 29 January 2018
Revised date: 2 April 2018
Accepted date: 2 April 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Conditional Disruption of Hepatic Carbamoyl Phosphate Synthetase 1 in Mice
Results in Hyperammonemia without Orotic Aciduria and
Can be Corrected by Liver-Directed Gene Therapy**
