Estimation of crystallinity of indomethacin by usage of terahertz time-domain spectroscopy and calibration curve: Correlation between crystallinity and solubility

Issei Takeuchi, Mako Otsuki, Hideki Kuroda, Kimiko Makino

PII: S1773-2247(17)31022-5

DOI: [10.1016/j.jddst.2018.03.003](https://doi.org/10.1016/j.jddst.2018.03.003)

Reference: JDDST 596

To appear in: *Journal of Drug Delivery Science and Technology*

Received Date: 28 November 2017

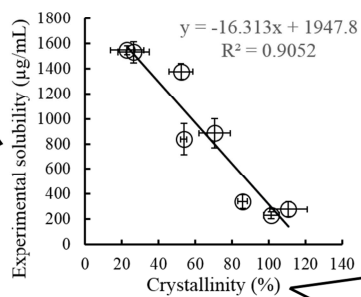

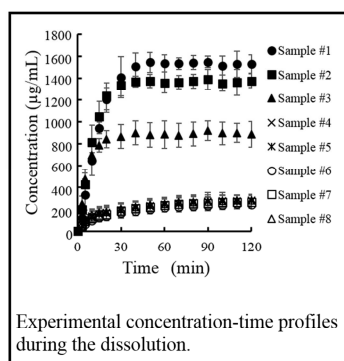

Revised Date: 27 February 2018

Accepted Date: 3 March 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Crystallinity and experimental solubility of indomethacin

THz-TDS can estimate drug solubility.

Crystallinity measurements using terahertz time-domain spectroscopy (THz-TDS).
